## Lok-Bolt

The Lok-Bolt™ is a pre-assembled single unit sleeve anchor available in carbon steel and stainless steel which can be used in concrete, block, brick, and stone.

Extension sleeves are added to create longer lengths.

## Expansion Nut Anchors

### (Internal Threads for Machine Screws)

- Ideal for anchoring equipment to concrete, brick, stone, etc.
- Lead sleeve and alloy cone resist oxidation.
- Fixtures removable.
- Attractive and finished appearance.
- No studs show when installed - the nut is in the hole. Masonry can be resurfaced.

## Hammer Drive Anchors

The Hammer Drive Anchor is an easy to use expansion anchor. Drill the anchor hole through the material to be fastened, place the anchor into the hole – a blow from a hammer will force the nail to expand for a permanent, reliable fastening.

Item ID	Anchor Size
16065	1/4 X 1
16066	1/4 X 1-1/4
16067	1/4 X 1-1/2

## Lag Shield Anchors

Designed for medium duty fastening on concrete, masonry, and brick. The Lag Shield is used with a lag screw to provide a dependable fastening. In hard masonry, short Lag Shields may be used to minimize drilling time. In softer masonry, the long Lag Shield will develop maximum holding strength.

## Wedge Anchors

Use in:

- Concrete or Wood

For heavy duty fastening applications where high pull out values in concrete are needed.

Install:

- Dock Bumpers, Hand Rails, Storage Racks, and Machinery

The anchor and the hole diameter are the same, simplifying installation by placing the anchor through the existing hole in the material to be fastened.

## Drop-In Anchors

Zinc Plated  
Carbon Steel

This anchor is a heavy duty anchor that is set by means of an internal expanding plug and setting tool. Once the hole is drilled, the anchor is placed in the hole and set by the blow from a hammer - directly on the setting tool.

Can be used in cinder block or concrete. Ideal for hanging pipe, duct work, machinery, etc.

## Wedge-Bolts

Wedge-Bolts are a universal anchor for high strength applications that work in virtually all base materials. This includes concrete, block, brick and stone. This anchor requires no assembly and is a “screw-in” design.

- Can be removed and re-installed in the same hole or a new hole
- To determine the proper length needed, determine the embedment depth required to obtain the desired load capacity. After that, add the thickness of the fixture to the embedment depth.
- **Use with Wedge-Bolt Drill Bits**
- Sold by the each
